RICEETA: ON-DEVICE INTERFERENCE FOR RICE LEAF DISEASE
DIAGNOSIS AND TREATMENT

An Undergraduate Thesis
Presented to the Faculty of the
College of Information and Communications Technology
West Visayas State University
La Paz, Iloilo City

In Partial Fulfillment
of the Requirements for the Degree of
Bachelor of Science in Information Technology

By
Danica Marie A. Lebrilla
Lennox G. Luis
Prince Deo S. Solanib
Aris Ernst Tabaque

Acknowledgment

The researchers would like to express their sincere gratitude to the specific individuals who contributed to the success and attainment of their research study:

To Almighty God, for giving power, guidance, and wisdom to the researchers, the courage and strength to survive different challenges that hinder the success of the researchers;

Dr. Regin A. Cabacas, adviser, for the patience, supervision, support, and encouragement;

Mr. Mark Joseph J. Solidarios, for the support and effort to help them in providing information, guidance, sharing his expertise, and for validating the system;

Dr. Bonna Sobrepeña Palma, grammarian, for showing support by correcting the study's manuscript grammatically.

Mr. Francisco A. Gonzaga, III, Head of LGU Cabatuan Department of Agriculture, for sharing his expertise, skills, and full support in the completion of the study;

Mr. Danilo C. Lebrilla, for providing the researchers assistance to test the system for usability;

West Visayas State University
COLLEGE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY
Ia Paz, Iloilo City

┌ The members of the panel, for the thoughtful
suggestions and recommendations for the improvement of the
study;

The College of Information and Communications
Technology faculty and staff, for the encouragement and
support; West Visayas State University, for shaping them to
become better students and to be globally competitive;

BS Information Technology 4A, for the friendship,
encouragement, and continuous support;

The researchers' families, Mr. and Mrs. Lebrilla, Mr.
and Mrs. Luis, Mr. and Mrs. Solanib, and Ms. Tabaque, for
their love, moral and financial support, understanding, and
sacrifices throughout the study;

And all those they failed to mention but contributed
so much in the fulfillment of this research, their heartfelt
gratitude.

Lebrilla, Danica Marie A.; Luis, Lennox G.; Solanib, Prince Deo S.; Tabaque, Aris Ernst; "RICEETA: On-Device Inference for Rice Leaf Disease Diagnosis and Treatment". Unpublished Undergraduate Thesis, Bachelor of Science in information Technology, West Visayas State University, Iloilo City, Philippines, January 2022.

Abstract

Rice is the staple food in the Philippines and identifying a rice disease in the early stage will prevent a massive loss and high quality of production for the farmers. This study developed a mobile application to help farmers accurately identify and provide recommended solutions for rice leaf diseases. The application can capture rice leaf diseases in real time using object detection algorithms. The model was generated by gathering images of different rice leaf diseases, classifying them, and uploading them on the Teachable Machine, a web-based tool that creates machine learning models. With this, the model that has been generated can classify each type of rice leaf diseases from one another.

The application also contains capabilities that allow the farmer to identify the area where the image was taken and

┌ summarizes the total rice disease captured for the month ┐
using graphs and tables.

The performance evaluation was rated Very Satisfactory in
terms of the overall performance of the application and a
test case for disease detection yielded a 100% accuracy
rate.
